DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nobuyuki, JP 10-272860.

The published Japanese patent application teaches a sheet-like blanket for printing (Title). The blanket comprises a base material, a compressive layer, a reinforcement layer, an elastic base layer having dispersed staple fibers and a surface elastic layer (Abstract and Figure 1). The base material comprises several cheesecloth woven structures and the woven reinforcement layer can include various fibers such as vinylon (sections 0009 and 0010). The base layers are held together with an adhesive such as acrylonitrile-butadiene rubber (i.e., elastic). Figure 1 illustrates the blanket arrangement, which is identical to the instantly claimed invention as set forth in claims 1-5.

With regard to the wet solvent cooling gel spinning method limitation recited, it is the position of the Examiner that such a method limitation is not shown to materially impact the final product structure. In other words, the method of producing vinylon yarns is not germane to the printing blanket composite. Accordingly, said spinning method limitation is not given patentable weight at this time. The burden is shifted to the Applicant evidence otherwise.

Art Unit: 1771

Nobuyuki does not explicitly teach the fibers used to form the base material, however, the woven reinforcement layer may comprise vinylon. As such, since the base material and reinforcement structures are woven and used in the same composite structure, it is the position of the Examiner that it would have been obvious to one having ordinary skill in the art at the time the invention was made to also form the base material from the same types of fibers used to form the reinforcement material. The burden is shifted to the Applicant to evidence otherwise.
